

OMNILOG

OmniLOG Key Catcher Solution

The OmniLOG Key Catcher Solution allows you to capture all keyboard activity between the keyboard and PC.

Know what your staff is up to...

USB Key Logger 2,000,000 keystrokes

Key loggers are small, discrete, easy-to-use devices that monitor all PC keyboard activity and install in a matter of seconds between the keyboard and PC. They capture everything that is typed into any keyboard however this device will plug into any standard 1.1/ 2.0 ports and capture everything including email, instant messaging, chat room activity and web URLs. The USB Key Log is organized into an advanced flash file system. Super fast data retrieval is achieved by switching into pen drive mode for download. Completely invisible for computer operation and no software or drivers required, also supports national keyboard layouts. 2MB Memory -A massive storage capacity of 2 million keystrokes which is the equivalent of a full year's activity
